Projects

Smart Attendance System (Smart Eye)	06/2023 - 06/2023
The Automated Attendance System leverages facial recognition technology to streamline attendance management in educational institutions and workplaces. Built using Python and OpenCV, it accurately identifies individuals in real time from video feeds and securely records their attendance in a SQL database. The user-friendly interface allows administrators to manage user registrations and generate reports efficiently. This system reduces manual tracking time, enhances accuracy, and incorporates security measures such as data encryption and user authentication, providing a reliable and modern solution for attendance management
